

Hot code updates for Cordova applications

Goal

Creation of an updatesystem which is able to distribute personalized updates for Cordova applications

Why?

- Server-side restriction of app content
- Controlled distribution of new updates

First stage

Extensive qualitative research on the Cordova framework and update plugins

Result

CodePush update plugin as the foundation of the system

Second stage

Expansion of the CodePush plugin's functionality by adding two additional servers

Result

A flexible updatesystem for personalized updates which is:

- Scalable
- Secure
- Easy maintainable
